PREFACE

As a student of Bachelor of Computer Application according to the syllabus subscribed by Bhakta Kavi Narsinh Mehta University, Junagadh(Gujarat). In 5th semester of B.C.A. to prepare a project on any Particular subject of Student choice. The project should be selected on precise subject that will full fill the requirements.

The main objective of the project is to develop Awareness regarding Application of Theories in the modern world of Information Technology.

Here the project report Training is under taken at Dr.V.R. Godhaniya Institute of Information technology in porbandar. Project report has been prepared on the base of information collected which is a result of hard work done by us.

This report contains overview of the whole website anyone who is technical person can understand the contents of this report very easily.

ACKNOWLEDGEMENT

It is out great pleasure to present our project report on **ShoePlazza** which we conceived during the BCA 5th SEM affiliated to Bhakta Kavi Narsinh Mehta University.

I took this opportunity to express our sincere gratitude and we feel immense pleasure to thank our faculty, philosopher and guide **Bhavesh Sir** who helped us and gave full support in each and every way to fulfill and accomplish our project of **ShoePlazza : an e-commerce website**.

We are indebted to out collage Dr. V. R. Godhaniya Collage of I.T our principal **Mr. Sanjay Agal** and director **Mr. Dhaval Kher** for given us an excellent chance to prove our best work and efforts.

I am thankful to Bhavesh Sir who guide us very well circumstances with his bright knowledge. We are mostly thankful to him, for giving us the inspiration and dedication to successfully complete this project.

PROJECT PROFILE

Project name	ShoePlazza
Front End	HTML , CSS , JavaScript
Back End	PHP , MYSQL
Developed by	Dinesh Khunti
Tools	Microsoft Visual Studio Code and Wamp server
Testing	Manual
Task	Analysis , Designing , Coding , Testing
Guided by	Bhavesh Sir
Developed at	Dr. V. R. Godhaniya IT College Porbandar

ABSTRACT OF PROJECT

Project Information :

The title of the project is ShoePlazza. This project is aimed to buy or sell all types of shoes online.

Our website is one of the best opportunities for those persons who wish to buy shoes from different brands from one website without visiting any places.

SCOPE

The scope of this website is to provide an easy information for the clients who wish to buy shoes or know about them.

- Client can easily check different brands.
 - Client can easily Order.
 - Client can easily view all details .
- The goals of the website are:
- To provide all kinds of products at one website.
 - Accuracy in buying and selling .
 - Easy to check information.
 - To provide most of the information on site.

FEASIBILITY STUDY

A feasibility study is a short , focused study, which aims to answer a number of questions:

Does the system contribute to the overall objectives of the organization.

Different type of feasibility study is as follow:

- 1) Operational Feasibility
- 2) Technical Feasibility
- 3) Economical Feasibility

Operational Feasibility

- The operational feasibility is a measure of how well a proposed system solves the problems.
- And takes advantages of the opportunities identification during scope definition and how it satisfy the requirement.
- Identification in the requirement analysis phase of system development.

Technical Feasibility :

- The technical feasibility assessment is focused on gaining and understanding of present technical resources of the organization and their applicability to the expected needs of the system.
- It is an evaluation of the hardware and software and how it meets the need of the proposed system.

Economical Feasibility:-

- The purpose of economical feasibility assessment is to determine the positive economic benefits to the organization that proposed system will provide.
 - It includes qualification and identification of all benefits expected.
 - The assessment typically involves a cost/benefits analysis

REQUIREMENT ANALYSIS

❖ Minimum hardware requirements:

Component	Minimum Requirement
Processor supported	3.0 ghz or above
architecture	32 bit , 64 bit
Memory	2gb or above
Hard disk	Installing 250gb minimum
Ram	4gb or above

❖ Minimum storage requirements:

Component	Requirement
Operating System	Windows 8 or above
Wamp	Php 7.4.9 or above
Software used in development	Microsoft visual studio code
Browser	Google Chrome or any browser

PROJECT LIFE CYCLE

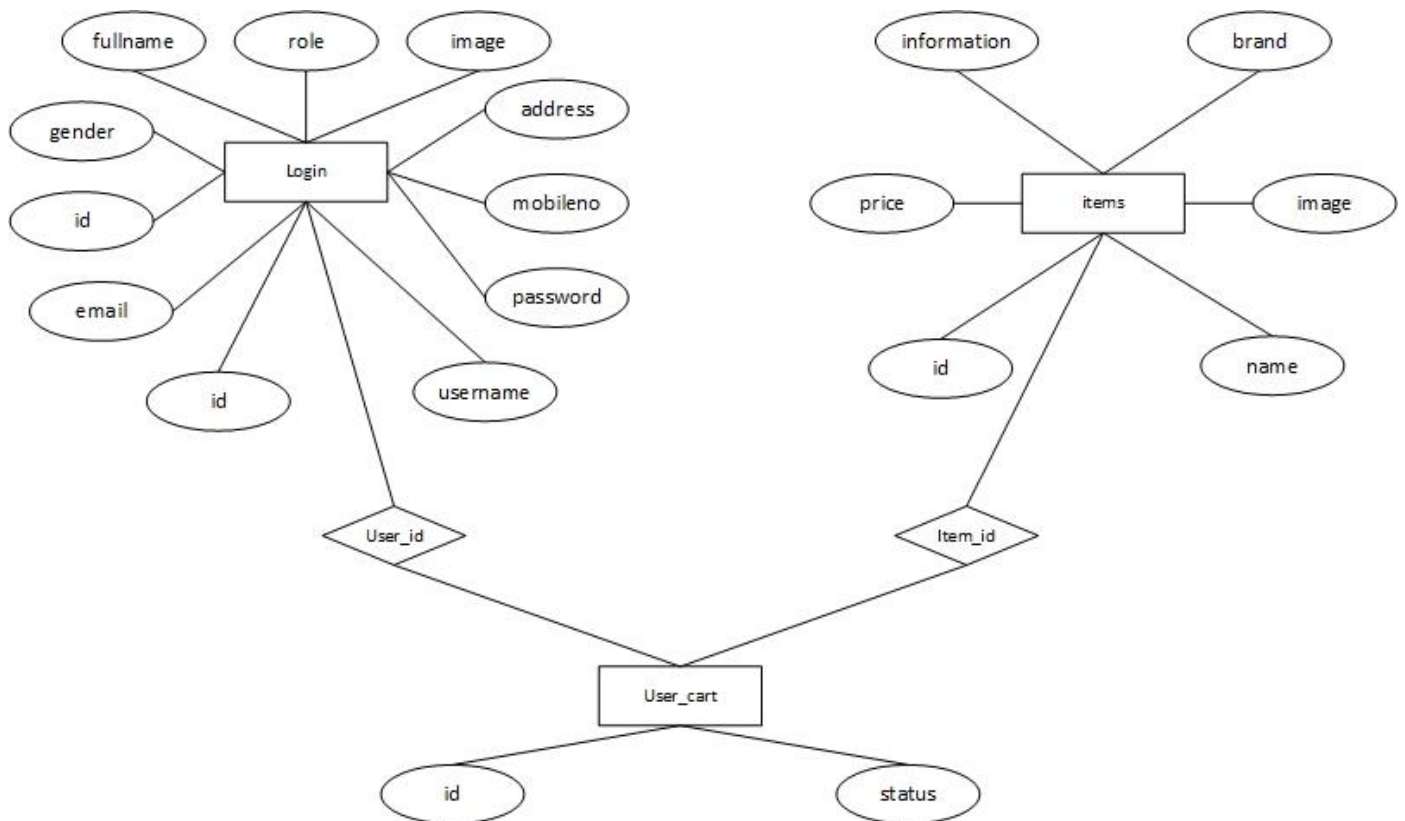

● E-R Diagram

○ What is E-R Diagram

- E-R Diagram stands for “Entity Relationship Diagram”.
- Peter chin developed ERDs in 1976.
- ERD modelling naturally precedes relational modelling.
- When an ERD is complete it is mapped to the relational model more or less directly and the relational model is mapped to its physical model.
- Entity relationship diagram are convenient visual representation of the ER Model frequently used in database design and other tools.
 - These are actually a number of variations of how these diagrams are represented.
 - We use the function, conventions which we believe to be the most common and clear.
- An entity-relationship diagram is a specialized graphic that illustrates the interrelationships between entities in a database.
- ER diagram often use symbols to represent three types of information.

❖ ER Diagram:

➤ **Data Flow Diagram (DFD)**

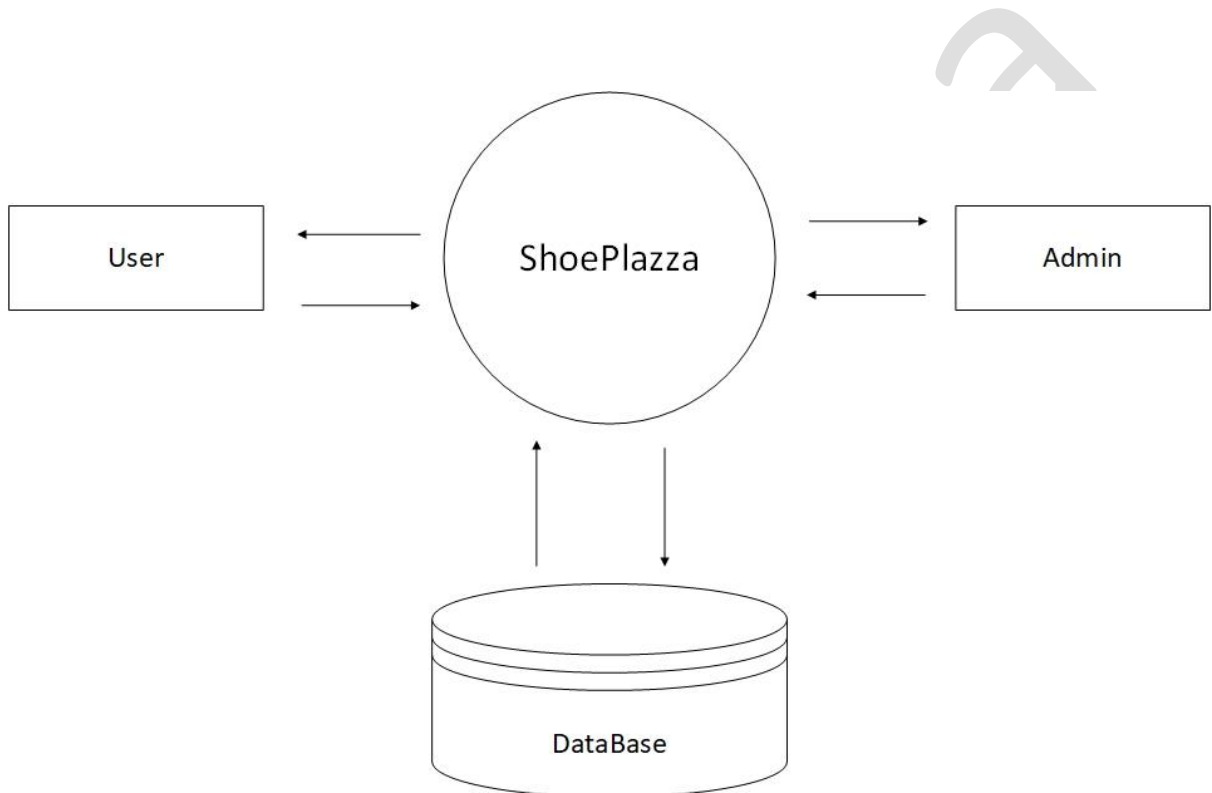

DFD graphically representing the functions, or processes, which capture, manipulate, store, and distribute data between a system and its environment and between components of a system.

The visual representation makes it a good communication tool between User and System designer. Structure of DFD allows starting from a broad overview and expand it to a hierarchy of detailed diagrams. DFD has often been used due to the following reasons:

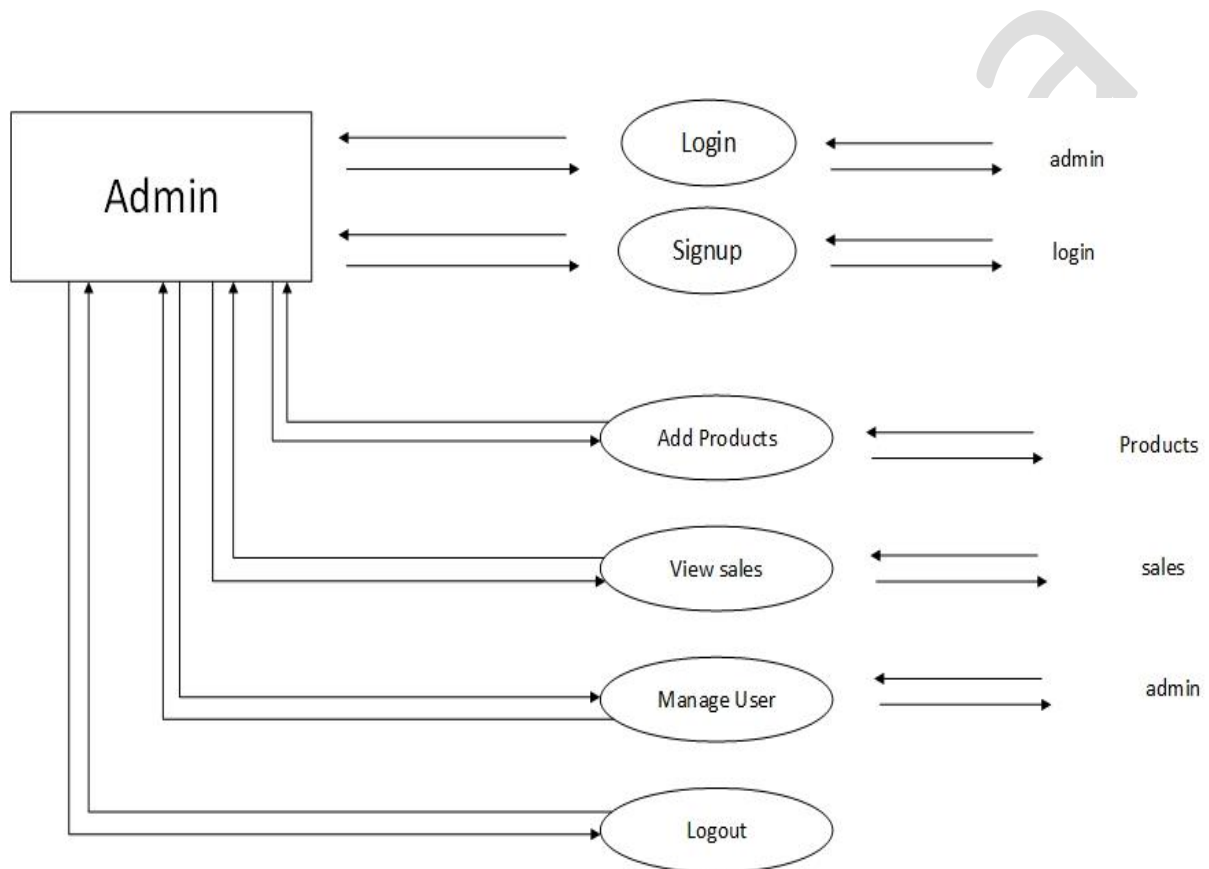

- Logical information flow of the system
- Determination of physical system construction requirements
- Simplicity of notation
- Establishment of manual and automated systems requirements

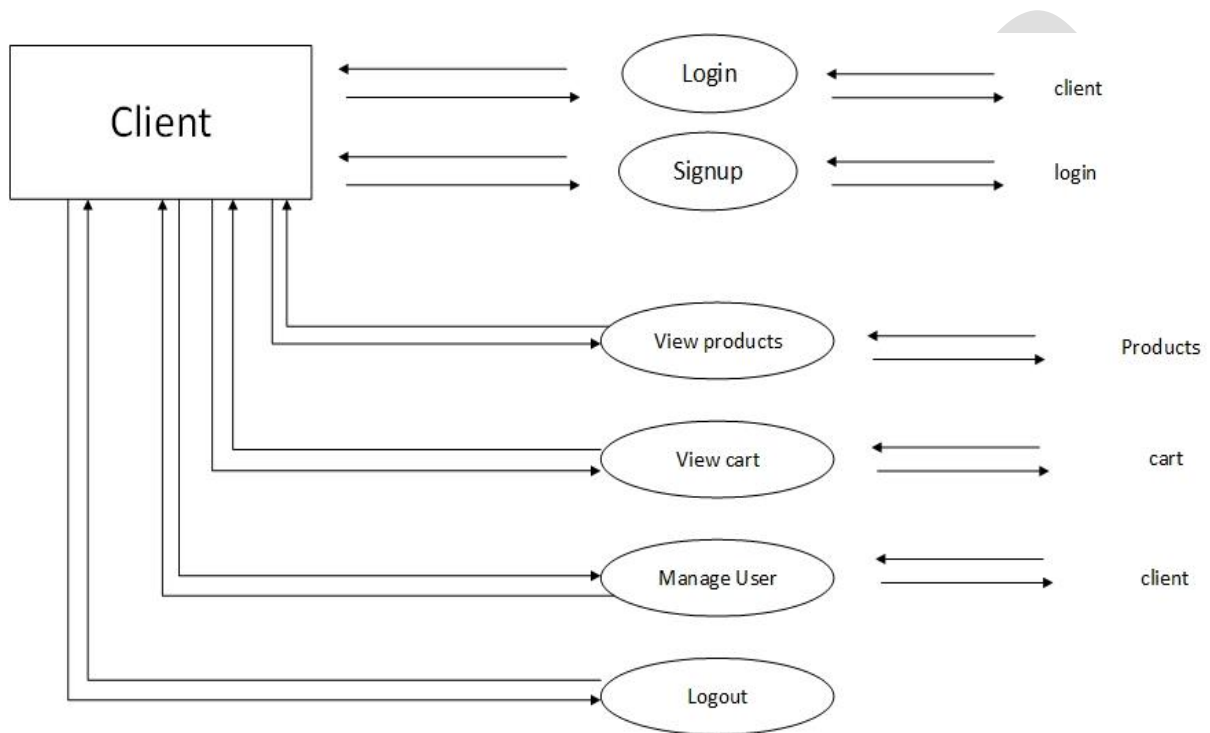

❖ DataFlow Diagram level:0

❖ DataFlow Diagram Level:1

❖ DataFlow Diagram Level:2

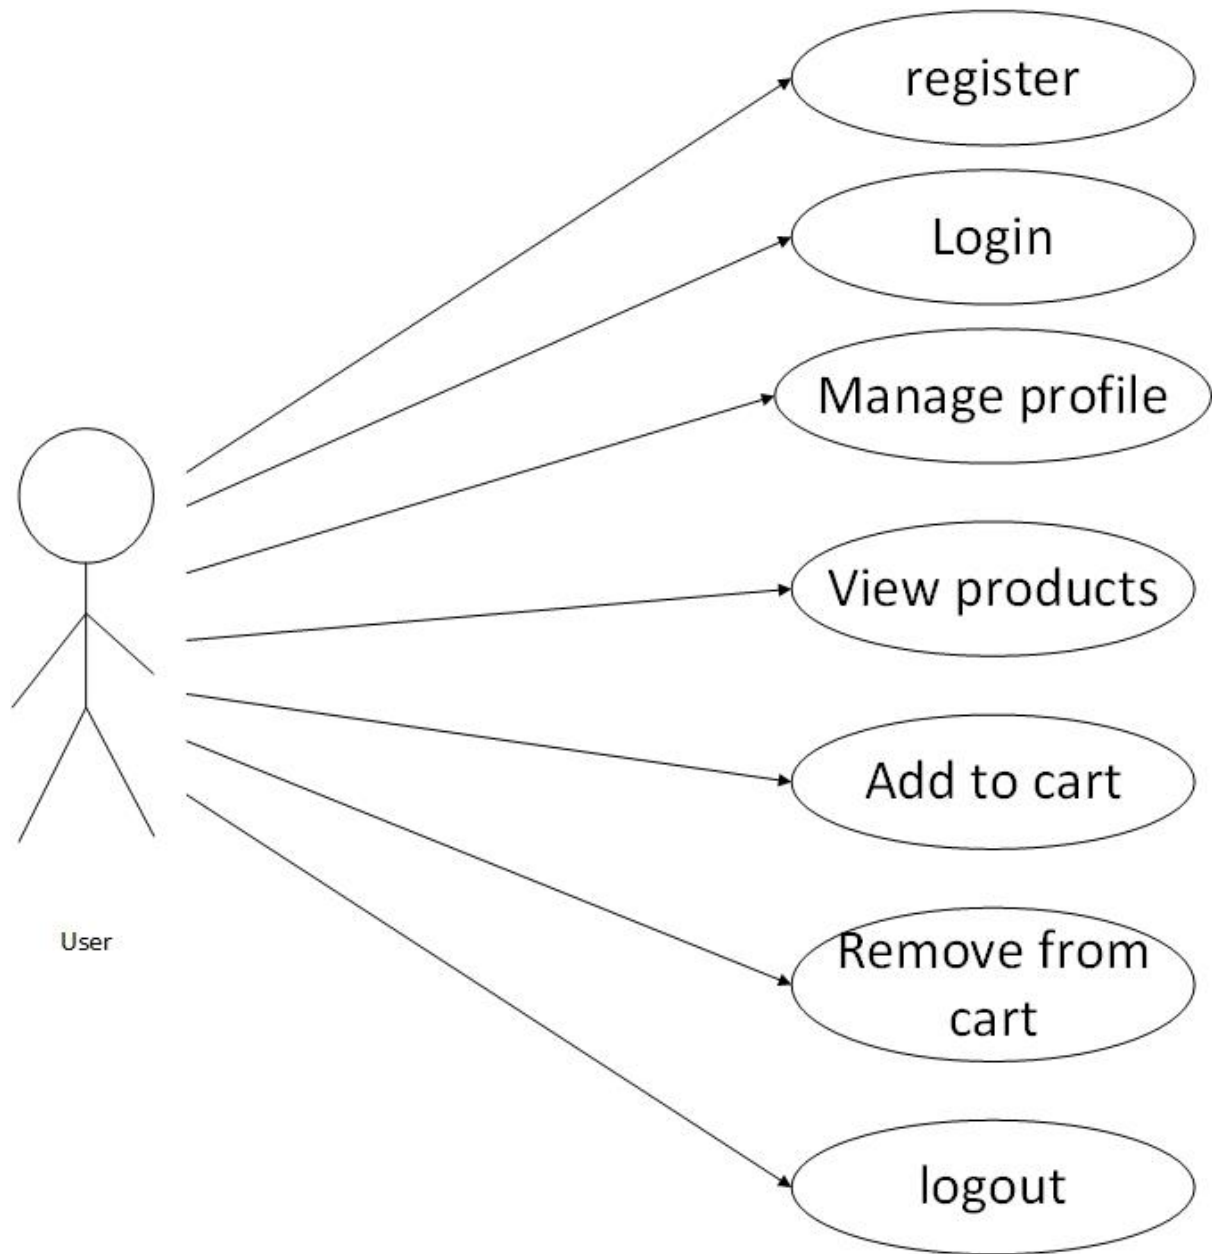

Use Case Diagram

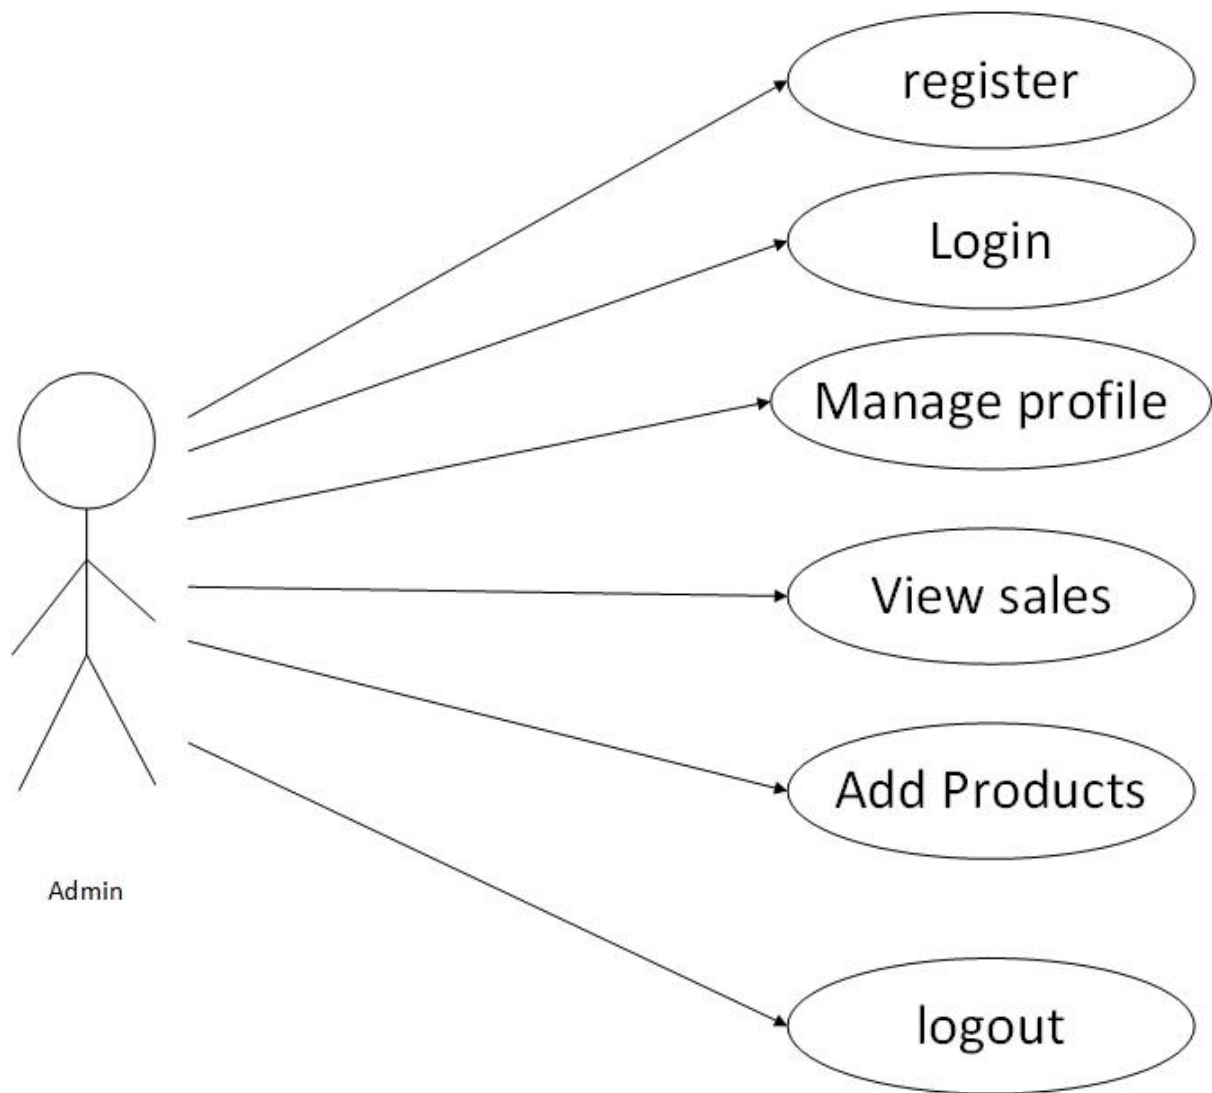

❖ What is use case diagram?

A use case diagram is a simplest representation of User's interaction with the system that shows the relationship between the user and the different use case in which the user is involved.

A use case diagram is a methodology used in system analysis to identify, clarify and organize system requirements.

Use case diagram are employed in UML (Unified Modeling Language) a standard notation for the modeling of real-world objects and system.

❖ Use case diagram for user :

❖ Use case diagram for Admin :

DATA DICTIONARY

Table:

❖ Login :

Sr.no	Field Name	Data type
1	id	int
2	fullname	Varchar(50)
3	age	Varchar(6)
4	gender	Varchar(3)
5	username	Varchar(30)
6	password	Varchar(30)
7	address	Varchar(50)
8	email	Varchar(20)
9	mobile	Varchar(10)
10	image	Varchar(50)

❖ user_cart :-

Sr. No.	Field Name	Data Type
1	id	Int
2	Item_id	Int
3	user_id	Int
4	status	Varchar(20)

❖ items :-

Sr. No.	Field Name	Data Type
1	id	Int
2	name	Varchar(30)
3	brand	Varchar(20)
4	image	Varchar(70)
5	information	Varchar(700)
6	price	int

TEST CASES PREPARATION

❖ Purpose:-

- The purpose of the test cases is to test the various input and see the output produce any error or not. A correct system must accomplish the following:
 - Computer correct results. Operate safely, and cause the server to operate safely.
 - Perform the tasks required by the system containing the software, as explained in the software applications.
 - Achieve these goals for all inputs.
 - Recognize inputs outside its domain.
 - We shall see that satisfying these pre-requisites depends on a variety of things. One of these things is to provide clear and correct software specifications.
 - Required Input and expected result.

TEST DATA PREPARATION

- When an extensive range or volume of data is needed for testing then using the test data preparation tool is of great help.
- They are very useful for performance and reliability testing, where a large amount of realistic data is needed. They may be used by developers and may also be used during system or acceptance testing.
- Test data preparation tools allow (enable) data to be selected from an existing database or created, generated, manipulated and edited for use in tests. The most sophisticated tools can deal with a range of files and database formats.
- Features or characteristics of test data preparation tools are as follows:
 - To extract selected data records from files or databases.
 - To 'massage' data records to make them anonymous or not able to be identified with real people.

- To generate new records populated with pseudo-random data, or data set up according to some guidelines, e.g. an operational profile;

ShoePlazza

SOFTWARE TESTING

❖ **Manual (Issues & Solutions) with data**

- Manual testing is a method used by software developers to run tests manually. There are many manual testing types which are carried out manually as well as automatically.

▪ **Black Box Testing:**

It is a testing method to test functionalities and requirements of the system. It does not test the internal part of the system.

▪ **White Box Testing:**

It is a testing method based on information of the internal logic of an application's code and also known as Glass box Testing. It works on Internal working code of the system.

▪ **Integration Testing:**

Integrated modules testing method to verify joint functionality after integration. Modules are typically code modules, individual applications, client and server applications on a network, etc. This type of testing is

especially applicable to client/server and distributed systems.

- **System Testing:**

It is a technique to test whole system.

- **Unit Testing:**

Testing method to test specific component of software or module. It is specially done by programmers and not by testers, because it needs thorough knowledge of the internal programming design and code.

- **Acceptance Testing:**

This type of testing verifies that the system meets the customer specified requirements or not. User or a customer does this testing to decide whether to accept application.

Automated (Issues & Solutions) o The method takes automation tool support to execute the test cases is known as Automation Testing. Automated testing is good for large project. It is a method which uses automation tools to run tests that repeat predefined actions, matches the developed program's probable and real results. If the project prospects and results align, your project is behaving as it should, and you are likely bug free. If the two don't align, still, there is a problem that requires to

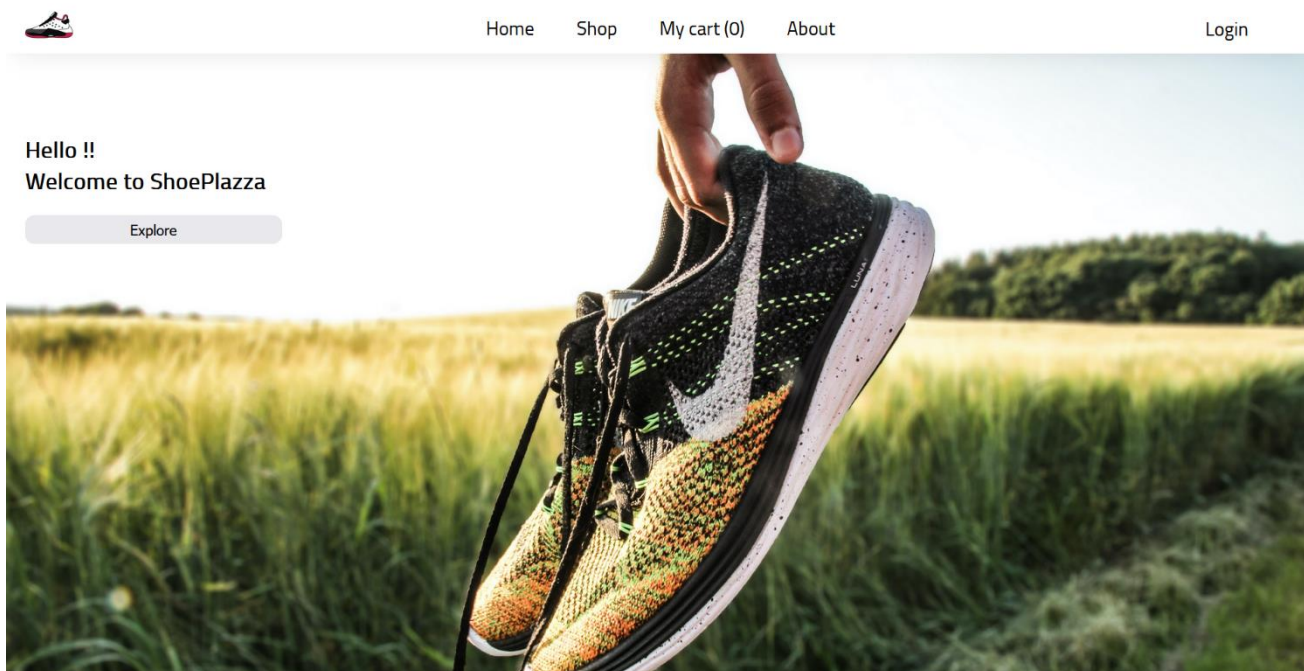

be addressed. You'll have to take a look at your code, alter it, and continue to run tests until the actual and expected outcomes align.

ShoePlazza is your place for athletic and easygoing shoes for the entire family from many named brands. You'll discover styles for ladies, men and children from brands like Nike, Converse, Vans, Sperry, Madden Girl, Skechers, ASICS and then some! With stores in the U.S. furthermore, Canada and much more choice online

ShoePlazza is a main family footwear goal for the popular brands you know and love. For each one of those shoe sweethearts out there, 'ShoePlazza' offer the one-stop goal to pick the correct match of footwear. To satisfy the affection for shoes, we offer heaps of alternatives from driving footwear marks, all under one rooftop. Gone are the days when you needed to go from store to store to locate the correct style and size for yourself.

So What are you waiting for [Shop Now](#)
